Beef Tracker™ System

Beef Tracker is a Windows® based feed management software program that works in conjunction with the scales on your feed mixer wagon/truck and allows you to accurately and easily collect and manage feedlot nutrition.

Optional: Cab Control in loader tractor uses internal radio to repeat TMR 3610.

Required: Digi-Star scalehead on TMR Mixer. TMR 3610 is a common option and can have internal radio to communicate to loader or send/receive data with office PC

Optional: Touchscreen 7600 connects to scalehead on TMR mixer to give advanced feature capabilities.

Optional: Radio Base Station mounted on roof by office, cable runs down into office and plugs into computer.

Required: Beef Tracker software on computer in office to create & manage feeding.

Optional: RF DataLink Software to manage sending or receiving loads for wireless communication.

Move your data from the feed mixer indicator to your PC and back.

Beef Tracker:

- Makes it easy to change call weights quickly
- Does not require internet connection
- Internet recommended when utilizing this program
- Moisture Tracker software integration
- 24/7 phone service support
- Employee and mixer management tools
- Capable of truck scale integration
- Optional: allow consultants online access to feeding data & specialized reports

Closeout reports with detailed summaries:

- Cattle movement
- Average daily gain
- Feed cost/lbs of gain
- Avg. daily cost of feed
- Dry matter conversion
- As fed conversion
- Days on ration
- Customer, order buyer, origin and destination

Transfer data options

include: USB Drives, Wireless (radio communication)

Beef Tracker is an economical and independent program providing you with tools for:

- Bunk reading
- Feed inventory management
- Lot Tracking
- Close out reports
- Easy daily feed adjustments
- Operator accuracy
- Detailed loading and delivery reports
- Quick dashboard with key performance indicators
- DMI
- Customizable report generators
- Tracking feed costs
